

SHUBHAM BHOSALE

Data Analyst

Navi Mumbai, Maharashtra, India | +91-8850452049 | shubhambhosle556@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in data collection, cleaning, exploratory data analysis (EDA), KPI tracking, and interactive dashboard development. Proficient in Microsoft Excel (VLOOKUP, Pivot Tables, Macros/VBA), Google Sheets, SQL (MySQL/MSSQL), Python, and Power BI. Experienced in preparing weekly Monday-to-Monday stock summary reports, managing debtors reports, and operating FMS (Financial Management System) and IMS (Inventory Management System). Skilled at translating complex datasets into clear, actionable reports for non-technical stakeholders and enabling business teams to focus on front-end analytics and decision-making. Leverages AI tools (ChatGPT, Claude) and prompt engineering to automate repetitive workflows and accelerate analysis.

TECHNICAL SKILLS

Languages & Query: Python, SQL (MySQL / MSSQL)

Excel Mastery: VLOOKUP, HLOOKUP, INDEX-MATCH, Pivot Tables, Macros (VBA), Advanced Formulas, Power Query

Visualization & BI: Power BI (interactive dashboards, DAX), Excel Charts, Google Sheets, BI Reporting

Data Analysis: EDA, Statistical Analysis, Data Cleaning & Validation, KPI Tracking, Trend & Anomaly Detection

Reporting & Operations: Monday-to-Monday Stock Summary Reports, Debtors Reports, FMS (Financial Management System), IMS (Inventory Management System)

Data Sourcing & Scraping: BeautifulSoup, Requests (HTTP), Kaggle, Government & Public Dataset Portals

Database Management: MySQL — structured database maintenance, dataset updates, query-based reporting

AI & Automation: ChatGPT, Claude AI, Prompt Engineering for data analysis, workflow automation, code generation

Soft Skills: Analytical Thinking, Problem Solving, Stakeholder Communication, Detail-Oriented

PROFESSIONAL EXPERIENCE

MIS Executive | Minolta Chem

April 2026 – Present | Navi Mumbai, India

- Prepare weekly Monday-to-Monday stock summary reports for management visibility into inventory movement and stock levels.
- Generate and maintain debtors reports tracking outstanding receivables, aging analysis, and payment status for finance and collections teams.
- Operate FMS (Financial Management System) and IMS (Inventory Management System) to maintain accurate financial records and inventory tracking.
- Source datasets from internal and external platforms; maintain and update structured MySQL databases for cross-departmental queries.
- Design Excel dashboards and KPI comparison sheets using Pivot Tables and advanced formulas to support management review.
- Clean and standardize raw datasets; enforce data entry formats to ensure consistency across reporting workflows.
- Generate scheduled MIS reports and dashboards to enable data-driven decision-making across business teams.

Data Analytics Intern | Cod-Soft

Summer Internship

PROJECTS

Sales Performance Analytics Dashboard | Power BI

- Designed and maintained live, interactive dashboards in Power BI to track sales KPIs — including channel-wise and geography-wise performance vs. plan — giving leadership real-time visibility into business performance.
- Owned the end-to-end data pipeline: collected, organised, and cleaned raw sales data using Power Query and XLOOKUP, establishing reliable, single-source-of-truth datasets for stakeholder reporting.
- Conducted exploratory data analysis to surface pricing trends, channel performance gaps, and growth opportunities; delivered data-backed recommendations to support channel expansion and pricing review decisions.
- Automated recurring sales reports using Power BI and Python, eliminating manual effort and enabling real-time monitoring of business metrics.

- Delivered clear, data-driven visual narratives to non-technical business leaders, translating complex analytics into actionable strategic inputs.

Sales Business Intelligence Database | SQL Server (MSSQL)

End-to-End SQL BI Project — Schema Design, Analytics, Automation

- Designed and implemented a fully normalized (3NF) relational database in Microsoft SQL Server with 9 tables covering Customers, Products, Orders, Sales Reps, Categories, and Regions — enforcing referential integrity via foreign key constraints and CHECK validations.
- Created performance-optimized indexes (covering and composite nonclustered indexes) on high-frequency query columns (OrderDate, Segment, SubCategoryID) to accelerate BI tool and reporting queries.
- Built 3 analytical SQL Views — vw_OrderDetail (flattened order data for BI tools), vw_MonthlySalesByRegion (revenue, profit, and margin by month/region), and vw_ProductPerformance (units sold, total revenue, profit, and avg discount per product).
- Implemented Window Functions and CTEs for advanced analytics — including running totals, month-over-month growth, sales rep ranking, and customer segmentation queries.
- Developed Stored Procedures for parameterized reporting and data management workflows, and DML Triggers with an AuditLog table to track all INSERT/UPDATE/DELETE operations with user and timestamp metadata.
- Seeded the database with 50 customers, 5 sales reps, 10 products across 15 categories, 50 orders (Jan 2024 – Feb 2026), and 50+ order line items to simulate real-world BI reporting scenarios.

EDUCATION

Bachelor of Computer Applications (BCA) — CSMU | CGPA: 7.86 / 10 | July 2023

CERTIFICATIONS & TRAINING

- Masters in Data Software Engineering — IT Vedant (Oct 2023 – Jan 2025)
- Data Analytics Job Simulation — Deloitte
- Python Programming — Kaggle
- AI Fundamentals — IBM
