

SHUBHAM BHOSALE

MIS Executive | Data Analyst

Navi Mumbai, Maharashtra | +91-8850452049 | shubhambhosle556@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Detail-oriented MIS Executive and Data Analyst with hands-on experience building structured Excel models, translating business requirements into logic-driven calculations, and delivering KPI dashboards that drive data-informed decisions. Proficient in Advanced Excel (VLOOKUP, INDEX-MATCH, Pivot Tables, Power Query, Macros/VBA), SQL (MySQL/MSSQL), Power BI (DAX), Python, and Google Sheets. Proven ability to own end-to-end reporting cycles independently — from raw data ingestion to final management-ready output. Strong process improvement mindset with a track record of automating repetitive workflows using AI tools and scripting. Comfortable working with large datasets and presenting clear, number-backed insights to internal stakeholders.

TECHNICAL SKILLS

Excel & Reporting: Advanced Excel Models, VLOOKUP, HLOOKUP, INDEX-MATCH, Pivot Tables, Power Query, Macros/VBA, Logic Building, Advanced Formulas, KPI Dashboards, MIS Reports, Google Sheets

BI & Visualization: Power BI (DAX, Interactive Dashboards), Excel Charts, Data Storytelling, Management Presentations

Database & Query: SQL (MySQL, MSSQL) — Structured database design, query-based reporting, stored procedures, triggers, analytical views

Programming & Automation: Python (data handling, Beautiful Soup, Requests), process automation, workflow optimization

ERP & Systems: FMS (Flow Management System), IMS (Inventory Management System)

AI & Productivity: ChatGPT, Claude AI, Prompt Engineering for report automation and code generation

PROFESSIONAL EXPERIENCE

MIS Executive | Minolta Chem

April 2026 – Present

Ghatkopar, India

- Build and maintain structured Excel models and KPI dashboards, translating business reporting requirements into logic-driven calculations for management decision-making.
- Prepare weekly Monday-to-Monday stock summary reports and debtors reports, independently owning the full reporting cycle from raw data collection to final management-ready output.
- Design year-wise comparison Excel models using Pivot Tables, Power Query, and advanced formulas to track KPI trends — enabling period-over-period benchmarking for leadership review.
- Operate FMS (Flow Management System) and IMS (Inventory Management System) to maintain accurate financial records, inventory tracking, and aging analysis for finance and collections teams.
- Clean, standardize, and restructure large datasets; enforce data entry formats and naming conventions to maintain cross-departmental data consistency and single-source-of-truth reporting.
- Drive process improvement by automating repetitive MIS workflows using AI tools (ChatGPT, Claude) and prompt engineering, reducing manual effort and accelerating reporting turnaround.
- Deliver structured analytical outputs and number-backed insights to internal stakeholders, translating complex data into clear, actionable business inputs for non-technical audiences.

Data Analytics Intern | Cod-Soft

Summer Internship

Remote

- Performed exploratory data analysis on structured datasets, applying Advanced Excel and Python to surface trends and prepare reporting-ready outputs.
- Built and validated data models to support business reporting workflows under senior analyst guidance.

KEY PROJECTS

Sales Performance Analytics Dashboard | Power BI, Power Query, XLOOKUP, Python

- Designed and maintained live, interactive Power BI dashboards to track sales KPIs including channel-wise and geography-wise performance vs. plan, providing leadership with real-time business visibility.
- Owned the end-to-end data pipeline: collected, cleaned, and structured raw sales data using Power Query and XLOOKUP, establishing reliable single-source-of-truth datasets for internal stakeholder reporting.

- Conducted exploratory data analysis to surface pricing trends, channel performance gaps, and growth opportunities; delivered number-backed recommendations supporting channel expansion decisions.
- Automated recurring sales reports using Power BI and Python, eliminating manual effort and enabling real-time monitoring of business metrics — a direct process improvement initiative.
- Translated complex analytics into clear visual narratives for non-technical business leaders, presenting data-driven insights in structured, management-ready formats.

Sales Business Intelligence Database | *SQL Server (MSSQL) — End-to-End BI Project*

- Designed and implemented a fully normalized (3NF) relational database in MSSQL with 9 tables covering Customers, Products, Orders, Sales Reps, Categories, and Regions — with referential integrity via foreign key constraints.
- Built 3 analytical SQL views for BI reporting: flattened order data, monthly sales by region (revenue, profit, margin), and product performance (units sold, revenue, profit, avg discount).
- Implemented Window Functions and CTEs for advanced analytics including running totals, month-over-month growth, sales rep rankings, and customer segmentation.
- Developed stored procedures for parameterized reporting and DML triggers with an AuditLog table to track all data changes with user and timestamp metadata.
- Seeded with 50 customers, 5 sales reps, 10 products across 15 categories, and 50+ orders to simulate real-world MIS/BI reporting at scale.

EDUCATION

Bachelor of Computer Applications (BCA) | CSMU

July 2023 | CGPA: 7.86 / 10

CERTIFICATIONS & TRAINING

- Masters in Data Software Engineering — IT Vedant (Oct 2023 – Jan 2025)
- Data Analytics Job Simulation — Deloitte
- Python Programming — Kaggle
- AI Fundamentals — IBM
